

SCAIME : in partnership with Schneider Electric

Scaime, a European leader in load cells and weighing solutions, is pleased to announce its acceptance to the « Collaborative Automation Partner Program », created by Schneider Electric in order to offer even more extended automation solutions to its customers.

For this partnership, Scaime was selected to bring its know-how, product range as well as long term experience in the field of checkweighing, filling and dosing applications, taking advantage of its new eNod3 digital transmitter.

eNod3 – Weighing, filling and sorting at high speed

With eNod3, Scaime provides a highly competitive solution for load cell integration into industrial automated systems. It can be connected to PLC's using RS485, RS232 and CANbus communication ports, using Modbus-RTU and CANopen protocols.

In addition to offering powerful functionality for high speed measurement transmission, eNod3 includes specific application software dedicated to dynamic weighing:

- It controls independently the complete process of checkweighing or dosing, also taking in consideration external detector signals.
- It includes powerful digital filters dedicated to vibration noise cancellation.

Especially designed for dynamic weighing and dosing, eNod3 offers a real guarantee for manufacturers to obtain the best solution for a quick and accurate weighing process of their filling, sorting and weighing machines.

About SCAIME :

With its headquarters located in Annemasse (France) and powerful ISO9001:2000 certified manufacturing facilities in France and China, SCAIME has for many years combined renowned technological know-how with a strategy of continuous innovation.

Since it was founded in 1983, SCAIME has stood out as the #1 French manufacturer in the field of load cells and ranks among the world leaders, exporting 50% of the production in more than 45 countries.

SCAIME also provides solutions in the field of physical parameters measurement with a wide range of force, torque, pressure and displacement transducers together with an extensive choice of electronics allowing analog or digital signal processing.
